

IN THE CLAIMS:

Please amend Claim 15 as follows.

1. to 3. (Cancelled).

4. (Previously Presented) The electrophoresis display apparatus according to claim 15, wherein a support member is placed between said first substrate and said second substrate so as to partition pixels of the display apparatus.

5. (Previously Presented) The electrophoresis display apparatus according to claim 4, wherein said second electrode is provided on said support member.

6. (Previously Presented) The electrophoresis display apparatus according to claim 4, wherein said second electrode is placed between said support member and said second substrate.

7. to 14. (Cancelled).

15. (Currently Amended) An electrophoresis display apparatus comprising:
a first substrate and second substrate arranged with a predetermined gap in
between;

an insulating liquid and a plurality of charged particles enclosed in the gap between ~~these~~ said first and second substrates, providing a pixel;

a first electrode placed along said first substrate and having a first electrode display area over a relatively wide area of ~~[[a]]~~ the pixel; and

a second electrode having a voltage applied therebetween and said first electrode, said electrophoresis display apparatus carrying out a display by applying a voltage to these electrodes and moving said charged particles, wherein

said first electrode borders said second electrode at a border portion,

said charged particles are colored in a color, ~~and~~

a colored layer having the same color as the charged particles is formed in the area of ~~the~~ said second electrode and the border portion, with said colored layer covering part of said first electrode display area of said first electrode, and

wherein the first electrode display area covers the colored layer and an area of said first electrode uncovered by said colored layer.

16. (Cancelled).

17. (Previously Presented) The electrophoresis display apparatus according to claim 15, wherein the border portion is a strip-shaped portion.

18. (Previously Presented) The electrophoresis display apparatus according to claim 15, wherein the colored layer colors the second electrode and the border portion in the same color as the charged particles.
